PDFs, slides and photos on TV without HDMI

Open a page. Connect. Show.

Your document on the shared screen. The page controls on your phone.

Quick walkthroughs for PDFs on a projector, PowerPoint presentations and photo slideshows. Use the screen at home, in a meeting room or in a classroom.

Open vuthis.com on the display to get started

The screen is ready in three steps

01 Open vuthis.com on the display

Use the TV or projector browser. For a projector already connected to a computer, open the page in that computer's browser.

02 Connect from your phone or laptop

Scan the QR code on the display with your phone. On a laptop or tablet, open vuthis.com/r and enter the screen code.

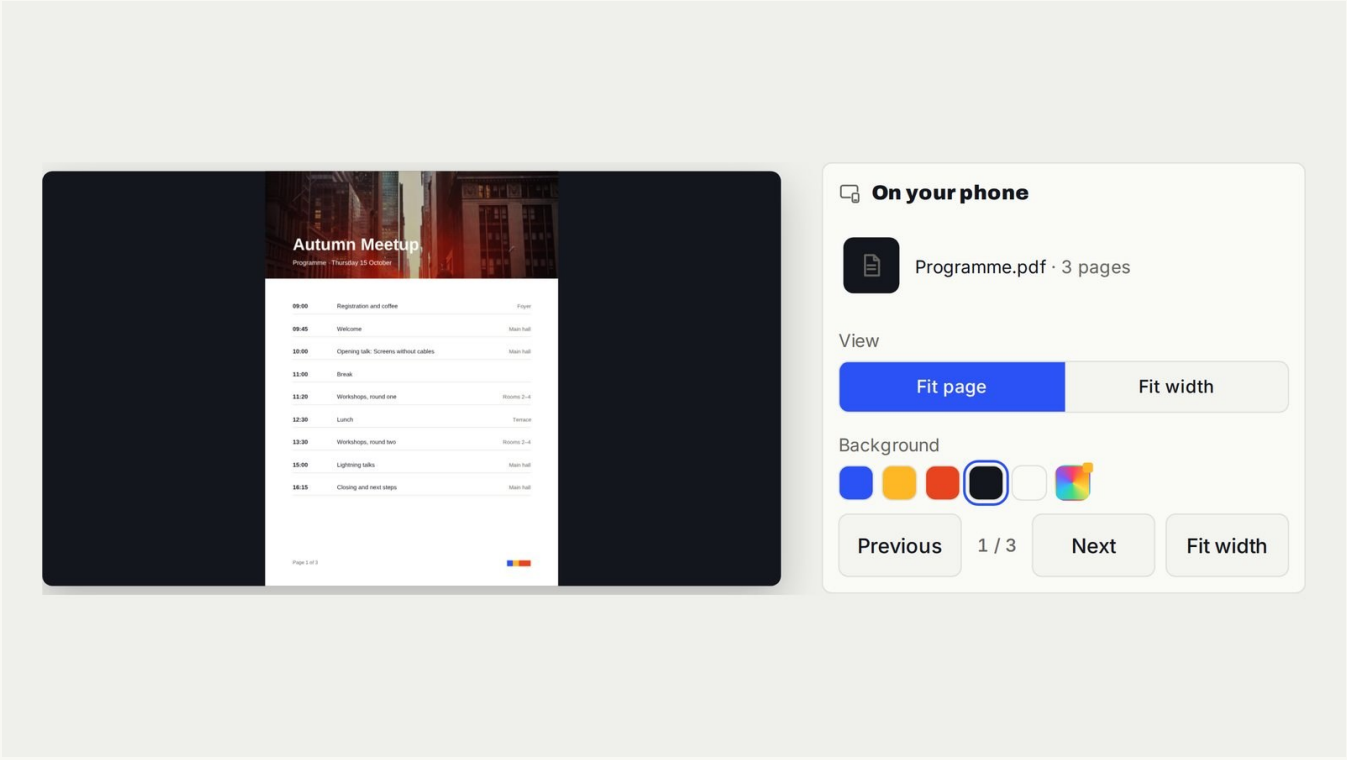

03 Choose the content and show it

Pick Document for a PDF, or Photos for pictures. Select the file, review the preview and tap Show now.

Each device can use its own internet connection. The controller can be nearby or remote.

Enter a screen code on a laptop or tablet

A PDF on TV or a projector

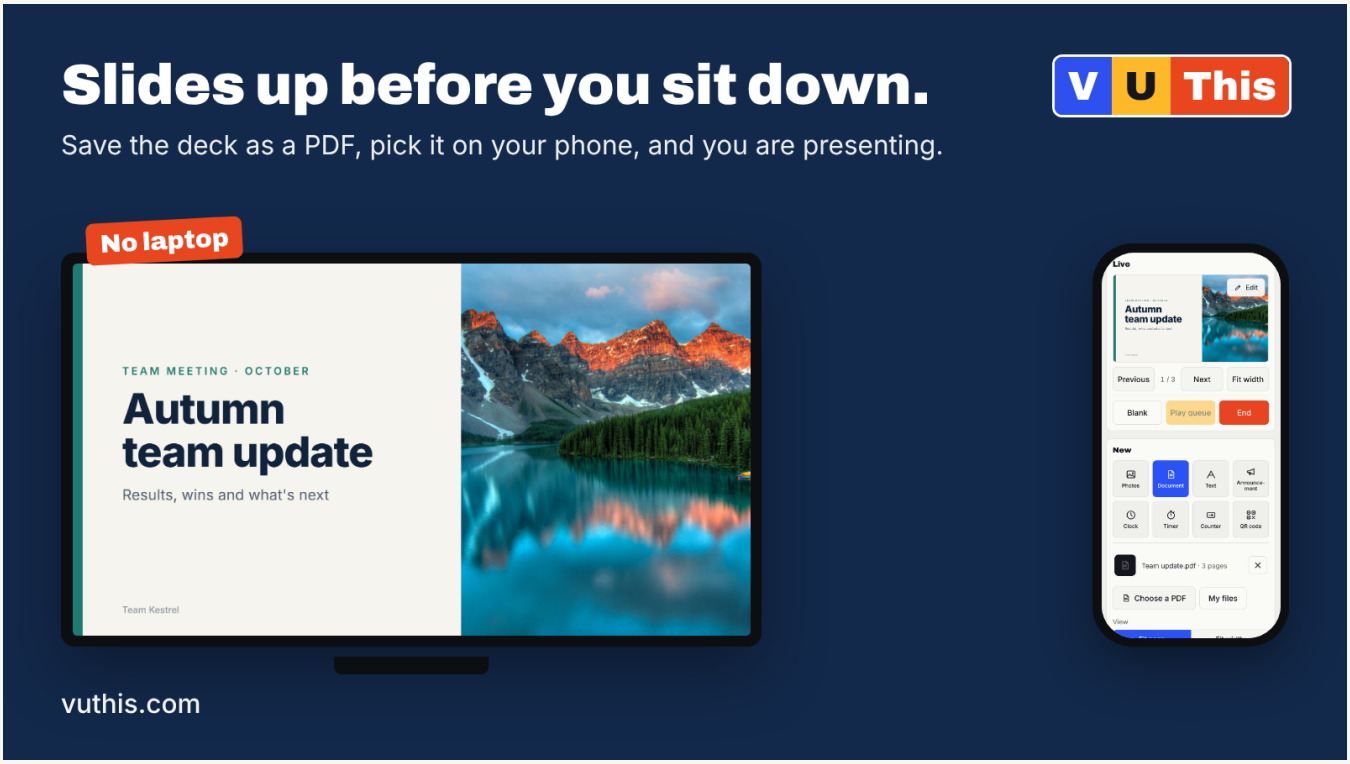

The room sees the document. Your phone turns the pages.

Open vuthis.com on the display, connect your controller and choose Document. Select the PDF and tap Show now. Previous and Next move through the document while the controller shows your position.

Fit page keeps the complete page visible. Fit width enlarges a tall document; the controls move through it a screenful at a time before changing page.

Full PDF and projector instructions

PowerPoint on TV, from your phone

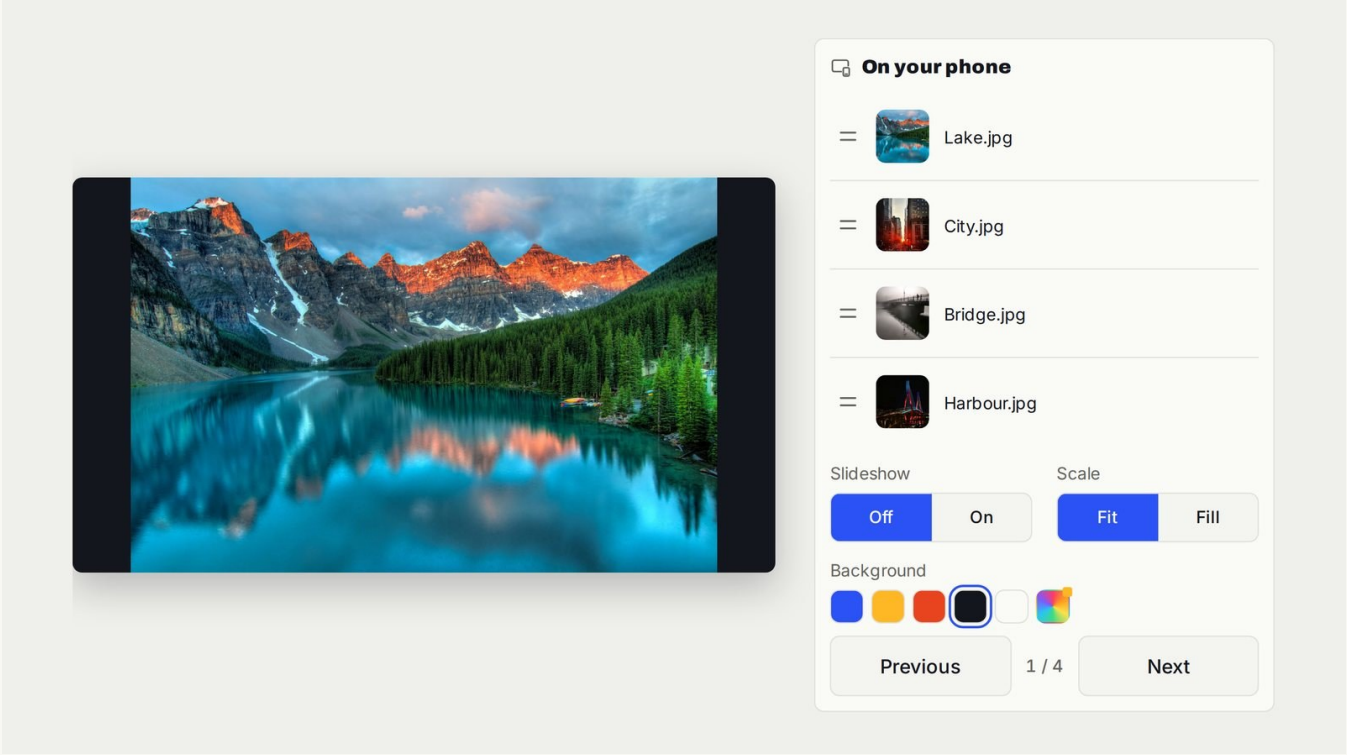

Save the slides as a PDF. Your phone becomes the clicker.

In PowerPoint, use File, Save As or Export and choose PDF. In Google Slides, use File, Download, PDF. Keynote also exports a PDF. Keep the PDF available on the device you will use as the controller.

Connect to the screen, choose Document and select that PDF. Use Next and Previous while you speak. Fit page suits a landscape slide deck. For a staged build, make each stage a separate slide before exporting.

PowerPoint and PDF display guide

Photos on TV from your phone

Choose the pictures. Enjoy them together.

Open vuthis.com in the TV browser and scan the screen code with your phone. Choose Photos, select the pictures and tap Show now. Use Previous and Next to choose the pace.

Turn Slideshow on when the pictures should change automatically. Set the seconds per photo. Fit shows the complete picture; Fill uses the screen edge to edge. Only the selected content appears on the TV.

Photo slideshow instructions

A laptop can control the TV too

Your files stay on the computer you already use.

The display opens vuthis.com

Use the TV browser or the browser on a device already connected to the projector.

The laptop opens vuthis.com/r

Enter the code shown on the display. Choose the PDF or photos on your laptop and show them.

The connection works through the web

The screen and controller can use different networks. Use a phone on mobile data, a laptop on another network or a controller in another location.

A useful route when you need presentation slides, a document or selected pictures on the shared screen without an HDMI cable from your laptop.

Open the laptop controller

The same screen can do more

A timer everyone can see

Choose Timer, set the duration and a label, then show it. Pause or restart from the controller.

View the walkthrough

A message the room can read

Choose Text, write the words and show them. Update a welcome, direction or room change from another device.

View the walkthrough

Notices, clocks and live numbers

Use a notice board for announcements, a clock for a shared time, or a counter for a live tally.

View the walkthrough

A planned sequence of content

The Queue arranges screen content in order. The guide explains how photos, PDFs, messages and timers fit together.

View the walkthrough

Keep the walkthrough you need

This handbook is a PDF you can try on a screen.

Save this file to your phone or laptop. Connect to V U This, choose Document and select it. Turn these pages from the controller to see the workflow.

PDFs, PowerPoint slides and projectors

Photos and automatic slideshows

Large text on a shared screen

A TV notice board

Timers on TV or a projector

Clocks and time zones

Counters and live tallies

QR codes for a link or Wi-Fi

Screen playlists and the Queue

V U This. 3 November 2026. Product illustrations reused from the existing campaign. Current feature details and session options are on vuthis.com.
