Show a Guest Wi-Fi QR Code on a Hotel or Meeting-Room TV

Guest-network joining details in one scannable code on the screen.

A guest Wi-Fi QR code displayed on TV with controller settings on a phone. Product example.

1. Open vuthis.com on the TV or projector

Open vuthis.com in the display browser. For a projector, use its browser or the computer already connected to it. Keep the connection code on screen.

Result: The screen is ready for a controller.

2. Connect your phone, tablet or laptop

Scan the screen QR code with your phone. On a laptop or tablet, open vuthis.com/r and enter the screen code. Both devices need internet; they can use different networks.

Result: The content controls are on your device.

3. Choose QR code, then Wi-Fi

Choose QR code and select Wi-Fi. Use guest-network details you are authorised to show to this audience.

Result: The code is set up for guest-network access.

Use the controls. Check the result.

4. Enter the network and security details

Enter the network name exactly. Choose the correct security type and add the password when the guest network requires one.

Result: The joining details match the guest network.

5. Add a caption and show the code

Use a clear caption such as Guest Wi-Fi: scan to join. Choose Show now and check the code is visible where guests stand.

Result: Guests can identify the joining code.

6. Test joining with another phone

Scan from a separate compatible phone. Confirm it offers the correct network and complete any venue sign-in steps that network requires.

Result: The guest joining route has been tested.

Keep it ready for the room

- QR-code display is a Pass feature in the current product.

- A Wi-Fi QR code shares the joining details it contains. Show a guest network to its intended audience; captive portals can still require additional steps.

Open the working product

Open vuthis.com on your display | Connect with the screen code
