Display Large Text and Welcome Messages on TV

One clear message, readable from across the room.

A large welcome message on TV with size, position and colour controls on a phone. Product example.

1. Open vuthis.com on the TV or projector

Open vuthis.com in the display browser. For a projector, use its browser or the computer already connected to it. Keep the connection code on screen.

Result: The screen is ready for a controller.

2. Connect your phone, tablet or laptop

Scan the screen QR code with your phone. On a laptop or tablet, open vuthis.com/r and enter the screen code. Both devices need internet; they can use different networks.

Result: The content controls are on your device.

3. Choose Text and write the message

Choose Text. Enter the short message the room needs: Welcome, Registration this way, Meeting in room 4 or Back at 2:00.

Result: The message says one clear thing.

Use the controls. Check the result.

4. Choose S, M, L or Max

Use L for one large line or Max when the message should fill the screen and may wrap. S and M leave more space around the words.

Result: The message has the intended scale.

5. Set the position and colours

Choose one of nine positions and a readable text/background combination. Keep the words clear from the farthest audience position.

Result: The layout suits the screen and the room.

6. Choose Show now and update when needed

Show the message on the display. Change the wording, position or available styling from the controller when the next instruction is needed.

Result: The room has the current instruction.

Keep it ready for the room

- A short message is easier to read from a distance than a dense paragraph.

- Use Announcement when you need a separate title, subtitle and footer.

Open the working product

Open vuthis.com on your display | Connect with the screen code
