Show Photos and Run a TV Slideshow Without Casting

The photos you choose on the TV. Move through them yourself or let the slideshow run.

Selected photos on TV with slideshow, timing and framing controls on a phone. Product example.

1. Open vuthis.com on the TV or projector

Open vuthis.com in the display browser. For a projector, use its browser or the computer already connected to it. Keep the connection code on screen.

Result: The screen is ready for a controller.

2. Connect your phone, tablet or laptop

Scan the screen QR code with your phone. On a laptop or tablet, open vuthis.com/r and enter the screen code. Both devices need internet; they can use different networks.

Result: The content controls are on your device.

3. Choose Photos and add your pictures

Choose Photos and select the images you want everyone to see. Drag the photo list into the intended order before showing it.

Result: Only the intended photo set is selected.

Use the controls. Check the result.

4. Choose Show now and check the first photo

Tap Show now. Use Previous and Next to move through individual pictures from the controller.

Result: The selected photo appears on TV.

5. Set Slideshow, timing and Start over

Turn Slideshow on for automatic advance. Set Seconds per photo and choose Start over when the set should repeat.

Result: The photos advance at the selected pace.

6. Choose Fit or Fill and control playback

Fit keeps the whole image. Fill covers the screen and can crop edges. Pause or Resume the slideshow from your device when the room needs a closer look.

Result: Your slideshow has the intended framing and pace.

Keep it ready for the room

- Fit protects faces, captions and picture edges. Check the crop before choosing Fill for a portrait photo.

- A photo slideshow is for pictures. Use Queue when the screen should alternate photos with notices, PDFs and other features.

Open the working product

Open vuthis.com on your display | Connect with the screen code
